| <b>JournalAI</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Next.js, TypeScript, Supabase, Docker, Kubernetes, Azure, GitHub Actions, Jenkins                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <ul style="list-style-type: none"><li>Developed an AI-powered journaling platform that processes journal entries and delivers structured mood insights using Groq AI, Next.js, and Supabase.</li><li>Implemented end-to-end CI/CD workflows with GitHub Actions, Jenkins, Docker, and Kubernetes to standardize testing, containerization, and cloud deployment processes.</li><li>Implemented a production-ready cloud deployment architecture integrating secure authentication, PostgreSQL persistence, containerized services, and automated delivery on Microsoft Azure.</li></ul> |

## Activities for Discord

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Android, Java, C++ , JNI, Discord Partner SDK                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <ul style="list-style-type: none"><li>Developed an Android application that enables complete mobile control of Discord Rich Presence, extending capabilities not available in the official Discord mobile client.</li><li>Implemented a native JNI integration layer between Android and the Discord Partner SDK to maintain persistent SDK sessions and reliable real-time communication.</li><li>Implemented secure authentication, encrypted credential storage, intelligent image caching, and foreground/background services to keep Rich Presence synchronized during long-running app sessions.</li></ul> |

## Skills

|                                                                                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Languages:</b> C#, Java, Kotlin, TypeScript, JavaScript, Python, SQL                                                                                                          |
| <b>Frameworks &amp; Technologies:</b> ASP.NET Core, .NET, React, Next.js, Node.js, Express.js, Entity Framework Core, Android SDK, Tailwind CSS, shadcn/ui                       |
| <b>Databases:</b> PostgreSQL, Microsoft SQL Server, MongoDB, Supabase                                                                                                            |
| <b>Cloud &amp; DevOps:</b> Docker, Kubernetes, GitHub Actions, Jenkins, GitLab CI/CD, Microsoft Azure, Oracle Cloud Infrastructure                                               |
| <b>Developer Tools:</b> Git, GitHub, Visual Studio, Visual Studio Code, Android Studio, Postman, GitHub Codespaces, Android Debug Bridge Tools, Docker Desktop, Virtual Machines |

## Certifications

---

- MongoDB Node.js Certification – MongoDB University 
- Web Development 101 – Pupilfirst 

## Activities & Achievements

---

- Published the research paper **Multi-Task Graph Attention Network for Kinematic Rehabilitation Exercise Analysis** at the **2026 IEEE International Conference for Convergence in Computing Technology (I3CTCON)**, indexed in IEEE Xplore.
- Published the open-source Android application **WhatsApp Status Saver** on the official **F-Droid** repository.
- Secured **6th Place** in the **COSC HackWeek Challenge**, a week-long competitive coding event organized by **CBIT Open Source Community (COSC)** in collaboration with **GeeksforGeeks**.
- Volunteered as an event coordinator for a college Idea Presentation event, managing and assisting 20+ participants.
